

High Noble, Noble, Non-Precious *with*

GDL GRIFFIN DENTAL
LABORATORIES

These restorations have superior surface smoothness and polishability caused by the homogeneous glass-phase they also have low wear resistance.

Prep Requirements

- Traditional

Indications

- Crowns and Bridges

Contraindications

- All allergies should be checked and metal sensitivity recorded after which an alloy should be chosen that benefits the patients individual case.

Cementation

Conventional Cementation: Due to high Degree of rigidity and stability of the framework conventional fixing with

- Zinc oxide phosphate cement or
- Glass ionomer luting (i.e. GC Fuji Plus) is possible in most cases

With conventional cements make sure there is sufficient retention that the stump height is 3 mm.

Adhesive fixing: Adhesion with the porcelain fused-to-metal framework material should follow manufactures recommendations.

Alloy Types

High Noble, Noble, Non-Precious
